Innovation Rollout 2020

ZIEGLER presents new user guided operating concept

Giengen, April 2020 – Due to the rapid spread of coronavirus, the world's leading trade fair INTERSCHUTZ has renownedly been postponed to 2021.

The motto, “#whateverthechallenge”, that has been proclaimed for this event however still remains a guiding principle for ZIEGLER. The company now presents the latest innovations in the context of the “Innovation Rollout 2020”. After the ALPAS of the latest generation has been introduced to the market, the rollout now continues with the presentation of the new Z-Control.

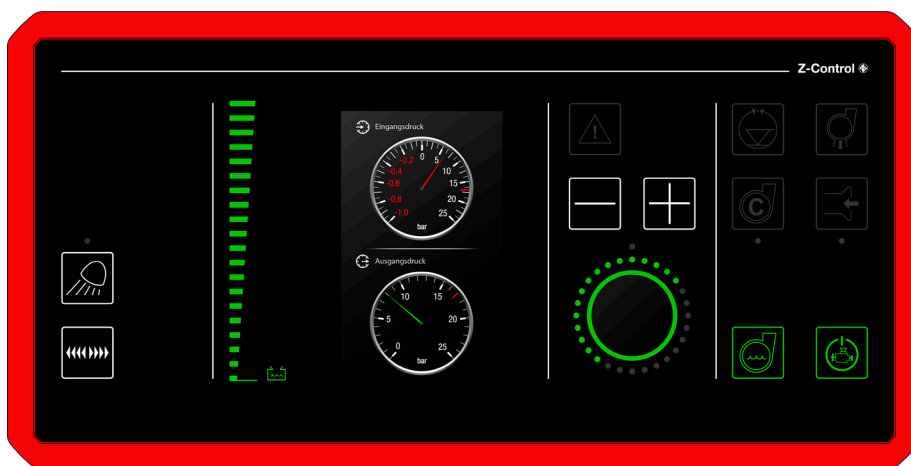

Z-Control – Benchmark among the operating concepts

Z-Control was presented in 2010 at the INTERSCHUTZ in Leipzig. Over the following 10 years, Z-Control has established itself in the market and is now the leading technology in the industry.

Clearly arranged, logical, easy to understand and simple to use even when wearing protective equipment and gloves. These are the demands for operating elements in firefighting vehicles. Z-Control meets them all – without restriction.

No matter whether adjustably arranged on the dashboard or ergonomically positioned as the pump control panel: the Z-Control convinces the user with a very clear and user-friendly structure.

On the control panel, the operator has an overview of all functions. Large buttons allow the easy operation even when wearing gloves. Of course, all other components such as a light mast or generators can be operated via Z-Control as well.

Z-Control with its clear and well-structured user interface is the first choice for every operator.

If the product is already so excellent – why is there still room for improvement?

One of ZIEGLER's promises is the consistent development and improvement of its products. This presupposes that even successful products and systems have to be questioned and improved constantly. It is very important for ZIEGLER to meet or even exceed the current and future needs and requirements of customers worldwide.

Albert Ziegler GmbH · Giengen/Brenz · Germany

There, ZIEGLER has not even stopped at the proven Z-Control. Nowadays, topics such as operating safety and the ease of learning also play an important role in the development. The construction and design team of ZIEGLER Group has taken Z-Control up to the next level, taking into account practical experience, customer feedback and incorporating the latest trends and technologies.

The intelligent user guidance supports the operator significantly during the operation.

The development process was accompanied by careful application analyses, operating logics and internal and external test procedures. In several workshops the requirements for a new control concept were developed by taking care of different interest groups. One of the main tasks was the analysis and optimization of the current user-friendliness. User surveys, field studies and rapid prototyping were used for this purpose.

In addition to meet customer requirements, our main focus was also not only to meet but also to exceed current national and international standards. For you as user and customer this means that you acquire a tested HMI system that has passed all practical tests with flying colors. Furthermore, sustainability plays a special role for us. Z-Control can be configured differently at any time as it is exchangeable and expandable.

The modules of Z-Control can be networked with each other as well as with the “operator”, the mission control center, the fire station and – if desired – with the ZIEGLER Customer Service Center in the future.

All operating elements have an identical surface. The manual control unit is the smallest unit and can be used to operate the turret or the light mast for example.

Albert Ziegler GmbH · Giengen/Brenz · Germany

Of course, the new Z-Control has some advantages over the previous Z-Control. Which exactly these are, will be clearly shown in the following 10 points:

10 good reasons for the new Z-Control

- 1** Identical user interface for all vehicles and components of the ZIEGLER Group: for the Ultra Power as well as for the Z-Class, for a standard vehicle as well as for a turret
- 2** Safe operation, glove-friendly and intuitive user guidance (through light color and light animation): only the functions that can be activated will be visible on the interface
- 3** Assistance system for warnings, errors, status displays and other information
- 4** Training mode possible – the entire system (the vehicle) can optionally be set on training mode and the operator can perform for example a simulated foam application.
- 5** The housings consist of one shell each (in contrast to two shells before) and are sealed with the operating foil. Therefore the operating units are absolutely waterproof in both vertical and **horizontal** positions.
- 6** Maximum flexibility in the combination of functions through modules that can be combined individually in various housings or in operating control panels. These can be used in standard or special vehicles and in the dashboard of the new Z-Class.
- 7** New series of mobile intelligent control units such as Plug'n'Play or Multi-Connect interfaces are available on products and vehicles in a variety of ways
- 8** Ergonomic attachments to ensure that the control unit sits comfortably in the hand
- 9** Integrated telematics function for future access to all important data (using cellular, W-Lan, simcards)
- 10** Flexibly expandable according to customer requirements – if necessary, many functions can be changed, exchanged or added later.

The new Z-Control is now available for every type of vehicle and is already being used in the first vehicles which would originally have been presented at INTERSCHUTZ. Of course ZIEGLER will also report on the first vehicles with the new Z-Control.

About ZIEGLER

The Albert Ziegler GmbH is a leading international supplier of vehicles for firefighting, civil protection and the police, as well as firefighting accessories and technology. The comprehensive product range includes clothing for the firefighting services to highly specialized pumping and fire extinguishing systems to all kinds of emergency vehicles. Out of currently more than 1,400 employees worldwide, around 680 are employed at our headquarters in Giengen an der Brenz, Germany. Other ZIEGLER manufacturing facilities are located in Germany (Rendsburg and Mühlau) as well as The Netherlands, Croatia and Indonesia. Sales and service offices can also be found in the Czech Republic, Italy, Slovenia and China.
